

# Histograms

Histogram is a graph or a plot which gives us an overall idea about the intensity distribution of an image.

It is a way of understanding the image.

By looking at the histogram of the image we can get the idea about the contrast and brightness of the image.

Histogram tells us if the image is properly exposed or not.  
In digital it is very useful.

The Lightning condition is commented on well, was it light or harsh with the help of histograms.
